

Now! TUCKER SNO-CATS All-New KITTEN Model 300 Series

Featuring All-New Revolutionary Steel and Rubber Track

MORE ROOM • MORE POWER • MORE SPEED • MORE COMFORT

THREE TRACK OPTIONS

(AVAILABLE ON ALL SNO-CATS including Double-Drive Models)

- *1. ALL-STEEL TRACK and 108 SPECIAL HIGHLY DURABLE RUBBER PADS are designed for extremely hard usage under rough conditions, sure traction and for traveling on highways. This new solid steel track with rubber pads is flexible and strong and permits travel at higher speeds over rough and rocky terrain. . . . Patented pontoon and track system make it impossible for tracks to come off during operation.
- *2. PLAIN ALL-STEEL TRACK without pads (for utility and off highway uses.)
*The pontoons are equipped with adjustments that enable the operator to maintain proper track tension at all times.
- *3. Time-proven standard Tucker Sno-Grouser open-link tracks for snow and ice conditions of every kind.

The sensational new **KITTEN** with its vital new track concept conquers mud, snow, rough terrain and swamp-mud conditions.

Tucker SNO-CAT has conceived and perfected an entirely new concept of traction in cross-country transportation. This new type track has been designed to minimize difficulties associated with travel over rough terrain under adverse conditions . . . mud, swamp, rough and dry ground, as well as all types of deep or hard icy snow. Adhesion of mud to pontoons is eliminated by this new method of transferring the weight from the pontoon bottom to specially designed tracks and pads . . . snow and mud cannot clog the track system. The rubber pads also add safety traction for climbing ability, and traversing steep slopes. They provide the method for travel on hard surfaced macadam and concrete. Finger tip steering at all times.

(New ^{MUD} ^{snow} Track also available for 4-drive models)

MUD AND SNOW TRACK

KITTEN, MODEL 322, Aluminum Cab

Powered with air cooled front-mounted 40 H.P. Volkswagen engine.

Body, aluminum type.....illustrated	Pontoon & Sno-Grouser
